ROADMAP

UBUNTU

TOKENOMICS

"Empowering **CHARITY**
through
Cryptocurrency"

DISABILITY AND MENTAL HEALTH SUPPORT

People living with disabilities and mental health challenges in third world countries typically receive little or no support from the government and instead rely on family members, non-governmental organizations (NGOs) and religious groups. UBUT will provide support and donation to people living with disabilities and mental health problems.

Token Security

Like any new crypto token, UBUT will face a volatile market that requires diligent and responsible investment. We can promise that we have taken every step possible to ensure UBUT is fair, reliable, and a sustainable token. These initiatives include;

- Fair Launch to prevent bots and whales from front running the initial sale.
- Burned liquidity to ensure the longevity of UBUT.
- Self-Sustainability by implementing a “small” transaction tax that continuously builds liquidity to create a larger market cap, reducing the price volatility. As the coin gains traction, token transactions will have a lower impact and greater stability for our holders.
- Use of Multi-Sig Charity Wallet, a smart contract wallet that requires a minimum number of 3 people to approve a transaction before it can be completed.
- Either CertiK or TechRate will perform a security Audit for the UBUT Smart contract.
- Progressively Decentralized, so all decisions are made in the community's favour.
- Locked Liquidity: UBUT's initial token liquidity pool will be locked under a certified liquidity Locker, ensuring safety and security for our community of investors and preventing pump and dump scenarios.

UBUNTU SWAP DECENTRALIZED EXCHANGE AND NFT MARKETPLACE

Ubuntu Token team is developing its own exchange called UbuntuSwap. UbuntuSwap is a decentralized exchange running on the Binance Smart Chain (BSC). BSC provides the ability to launch tokens, smart contracts and decentralized applications with a much better efficiency than Ethereum. Ubuntu Token can be earned on it through yield farming and many upcoming events and pools. Additionally, UbuntuSwap will also support the creation, sale and purchase of NFT digital art and collectibles on a secured blockchain.

Features of UbuntuSwap Exchange

- Users can trade directly on the Ubuntu Token website.
- Users can exchange other cryptocurrency tokens for \$UBUT through Metamask or Trust Wallet and Wallet connect.
- It can create liquidity to support transactions.
- It enables staking to get rewards functionality.
- It enhances yield farming to encourage holding and increase exposure to market fluctuations.

We hope that by disclosing the information our holders and investors will trust that we are committed to the project's sustainability and longevity.

Unique Features of UBUNTU CHARITY TOKEN

Transparency

We believe radical transparency is the only way to build a sustainable community built on trust.

- 25% of the total supply of UBUT is initially allocated to charity in addition to the 2% tax fee on every transaction. These are placed in a multi-sig charity wallet
- We will use our social media platforms or a DApp to allow the UBUT community to participate in voting on how charity wallet funds are donated.
- To ensure end-to-end delivery, monitoring, and transparency on the delivery of the charity outreach, some members of the founding team will be involved in this process where convenient.
- Videos of charitable donations and partner events and outreaches will be shared on our social media platforms – Telegram, Twitter, LinkedIn, Facebook, Discord and Tik Tok etc.
- The charities Ubuntu Token will donate to will be decided by both our UBUT community in conjunction with our leadership team.
- All charity donations will be posted online with photos and videos of events and charity outreaches to ensure transparency.
- We will endeavor to be highly responsive to our community and allow them to vote on specific issues and causes they wish to support financially.
- All the founders' wallet allocation will be publicly listed on each founder profile section on the website.
- Ubuntu Charity also offers end-to-end support through our partner charity foundations. This will ensure absolute transparency and ensure that all funds donated are used for the right cause.

ABSTRACT

UBUT is a charity token inspired by our passion and love for charity and our desire to give back to the community. This token is inspired by the Ubuntu philosophy of love, compassion and kindness, "I am because we are".

UBUT has designed a mechanism to connect crypto investors with a reliable and robust donation pathway while also raising the bar for transparency and accountability in the Binance Smart Chain (BSC) charity token space.

UBUT will build a very strong charitable strategy that will leverage the capabilities of block chain technology to ensure all funding and donations have the widest reach globally across different charitable causes.

It will do this by leveraging block chain transactions tax fees to feed the donation wallet. We have an awesome token economy that will benefit both the token holders and the charities.

The initial launch of the token will be in the 3rd week of September 2021 through a presale event hosted on our ICO platform.

Charities & Foundations

The decentralized nature of crypto-currencies makes it a unique vehicle to implement charitable donations.

Donation to charity will be determined through a community poll system, allowing for unparalleled advocacy among our holders.

These donations will be live streamed, recorded, and posted on our social media platforms to ensure absolute transparency.

Ubuntu will be focusing on these three core areas of charity giving – Cancer Treatment, Disability and Mental Health Support, Education and Scholarship scheme for the less privileged Children.

VISION

To build a society where everyone can achieve their full potential and actively contribute to national growth and development. To improve the lives of millions of people living with disabilities and mental health problems, to support cancer treatment and to support the education of less privileged children.

CORE VALUES

To drive inclusion & transparency in charity through the power of possibilities in crypto, ensuring no one is left behind and putting a smile on the faces of the needy and the vulnerable people in our community.

PARTNERSHIP

Ubuntu Token is in collaboration with Achieving Souls Foundation, Chikwem Foundation, Ifediora Cancer Foundation (OCI), Apostle Samuel Egbo Foundation and Steno Memorial Foundation.

By supporting and donating to these charities, the Ubuntu Token will achieve its vision by leveraging on block chain transaction tax fees to feed the donation wallet.

Funds will be generated from various sources: transaction fees, percentage of token allocated to charity, fundraising, and donations.

Moving forward, our chosen Partners will continue to evolve. As we get more input from the community, an active forum and voting system will be implemented.

Long term, we will continue to build our global alliance network across the various charity causes.

CANCER TREATMENT

Cancer is still one of the leading causes of death around the world. Ubuntu Token will donate towards cancer treatment.

CHILDREN EDUCATION AND SCHOLARSHIP SCHEME

UBUT will provide financial support to fund education for the less privileged and disadvantaged children in our society.

TOKENOMICS

UBUT is a progressive deflationary decentralized finance (DeFi) token built to succeed. We have devised a custom tokenomics structure to provide a decentralized transaction network that operates on the BSC (BEP-20) network.

UBUT can be staked and farmed to yield rewards. These activities encourage holding and increase exposure to market fluctuations.

Ubuntu Token Economics is built on an innovative and community-led system that rewards both charities and investors and ensures that the token is rugged proofed, so that there will not be any pump and dump of Ubuntu Token.

Each transaction has a 6% transaction fee which is a tax that enables our community to HOLD and Share \$UBUT with each transaction. This 6% tax fee will be distributed as follows:

- 2% allocated to Charity Wallet for Distribution to the partner charity organizations.
- 2% allocated for buy-back, liquidity pools, and rewards pools such as community giveaways and airdrops.
- 1%: DAO for Token Development, Operations and Marketing.
- 1%: Token Holders in the form of an automatic dividend, which incentivizes holding

We have also allocated the following volume of tokens:
Charity (25%) – 25Billion Tokens, Liquidity pool (20%) 20 Billion Tokens, Operations and Marketing (5%) – 5Billion Tokens, Presales (25%) – 25Billion Tokens (15Billion for Community presales and 10Billion for Private Presales), Founding Team (15%) - 15Billion Tokens and Burn (10%) 10 Billion Tokens (burning will be scheduled quarterly).

How do we PROTECT our INVESTORS to ensure HIGH ROI?

Our excellent tokenomics and our commitment will ensure continuous investment growth of Ubuntu Token. Other mechanism that we have put in place to achieve this includes:

- Burning of 10% of the total supply of UBUT (10 Billion Ubuntu). There will be quarterly burning of some portion of Ubuntu tokens.
- 1% of the 6% tax is distributed back to Ubuntu token holders. This discourages selling by allowing holders to accumulate more Ubuntu simply by keeping it in their wallets.
- Donation Transactions from the charity and expense wallets to the partner charity organizations are scheduled in order to minimize any negative impact on the price of Ubuntu Token and to discourage dumping of UBUT
- Our excellent team is committed to protecting the financial interest of the holders of Ubuntu Token as we aim for the longevity and stable price of \$UBUT.

- Ubuntu Token is a decentralized exchange token, which can be staked and farmed to yield rewards which encourage holding, and increase exposure to market fluctuations.
- We maintain absolute transparency on the functionality and operation of the token in order to prevent any potential frauds and rug-pulls from happening.
- The distribution of donations and funds from the charity wallets requires multi-signature authorization, which provides an extra layer of security and ensures that funds are not misappropriated. A minimum of three signatures is required before the tokens are transacted out of the wallet where they are stored. The wallet address of all charity wallets and founder's wallets are available on Ubuntu Token's official website.
- The founders are allocated 15% of the total supply of the token. The wallets will be publicly listed on each founder's profile section on the website, along with their social media links such as LinkedIn. Furthermore, our website will include a function that allows users to donate \$UBUT directly to the charity wallet.

UBUNTUTOKEN VESTING SCHEDULE

Our vision is for Ubuntu to become the most trending charity token in all exchanges including CoinGecko, CoinMarketCap and DexTools.

The team has an excellent marketing and social media strategy that will attract many new community members, celebrities and supporters. Therefore, we want to let everyone know how Ubuntu Token distribution works.

25% of the total UBUT token supply has been allocated for presales and distribution, 15% to founders, 20% to liquidity pool, 5% to marketing and operations, 25% to charity and lastly 10% to burning on quarterly schedule. Ubuntu Token vesting process will help to prevent a pump and dump scenario, and encourage holding.

The 25% to be sold during pre-sales will be locked and distributed over the next 11 months and will be spread over four rounds across the investors — Seed, private presales, Community presales, and the public sale via IDO on one of the reputable decentralized liquidity exchanges e.g. Polka Starter or BscPad, etc. Each round has different metrics, pricing and token release schedule:

SEED

Ubuntu Token will be offered at \$0.000011, raising 200 BNB. Seed investors can sell 5% unlocked Tokens at listing, then the next unlock will be 2 months from listing (two month cliff) and the remainder linearly distributed over nine months.

PRIVATE PRESALES

\$UBUT will be offered at \$0.000022, raising \$220,000. 10% of private presales round will be unlocked at listing, then the next unlock will be one month after listing (one month cliff) and the remaining 90% will be distributed over six months.

Ubuntu Token will be offered at \$0.000033, raising \$495,000. 15% of community presales round will be unlocked at listing and the remaining 75% will be distributed over three months.

\$UBUT will be offered at \$0.00004. 100% of Public round tokens will be unlocked at listing. These can be staked for 1 year from Listing (20%APY).

Released linearly 3 months after the launch of UBUT token on 30th September 2021.

Here are some real world scenarios of how these unlocks will look like in the coming months. Assuming the public listing date for UBT is 30th September 2021, the ROI for someone who invests \$1,000 in each of the three rounds with locked tokens is summarized below;

- **Seed:** \$1,000 will result in 90,909,090.91 UBUT tokens. On listing, seed investors will receive 4,545,454.545 tokens. The remaining seed investor's tokens will be unlocked on 30th November 2021. In addition, they will receive 9,595,959.596 tokens per month over nine months i.e. until 30th of August 2022.
- **Private presales:** The Private presales investor investing \$1,000 will receive 45,454,545.45 tokens. On 30 September, private presale investors will receive 4,545,454.545 tokens. From 31st of October, they will then receive 6,818,181.817 UBUT tokens monthly over six months i.e. until 31st of March 2022.
- **Community presales:** The Community presales investor investing \$1,000 will be allocated 30,303,030.3 UBUT tokens in total. They will receive 4,545,454.545 tokens on 30 September 2021, and will subsequently receive 8,585,858.585 UBUT tokens monthly over three months i.e. until 31 December 2021.
- **Staking:** Staking is for 1 year from listing with a 20% APY. Stakers can use the reward and staking tokens immediately to buy UBUT.
Stakers can claim their tokens 1 year after the listing, not sooner. The distribution of tokens after a year will be linearly every 5 days for 1 month.
The rewards for staking will be paid with the tokens we will get for selling UBUT, so the circulating supply will not increase.

2% of every transaction is added to a charity pool that will be donated to partner charity organizations to support cancer treatment, disability and mental health, and the less privileged children education and Scholarship schemes.

Our investors can nominate charities through our website throughout the year (charities must meet certain criteria to be eligible). Every month we support charities in different categories.

UBUT Team is committed to best practices that ensure the integrity, transparency and accountability of our project and the diligent management of our investor's funds.

We pledge to make sure that the integrity and reputation of Ubuntu Token are protected. COVID permitting, we are willing to go in person to award the donations in order to be a direct link between our holders and our recipients. All pictures and videos of outreaches will be available for investors to watch on our website.

Ubuntu Token has an awesome system that benefits both the investors or holders and the charities as well. For instance, if the total monthly donation realized from the 2% tax allocated to Charity is \$10,000.

The charity selected by our holders at any given month will receive 80% of the donation (i.e. \$8,000 in our example) in one instalment but the remaining 20% (i.e. \$2000 in our example) will be reinvested back into buying Ubuntu Token and given to charity over a period of 2 years. In this scenario, this means that the charity organization will receive \$8000 at once and then instalments of \$83.33 every month for the following 24 months.

This idea of reinvesting the 20% of the donation amount received every month by buying Ubuntu Token ensures our price keeps going up and produces a safe and healthy investment growth, thereby encouraging holding, and preventing dumps.

This is equivalent to having a whale come in every month to invest 20% of the total donation amount (i.e. \$2000 every month) but never dumps because Ubuntu Token is in itself a whale. UBUT has applied mechanisms to encourage holding and prevent dumps. \$UBUT will not be dumped, as we will slowly redistribute.

The slow redistribution of that 20% will be synchronized with the 20% of the next charity donation, which will be used to purchase Ubuntu Token again in order to create more liquidity and holders, and as well, allow the token to increase exponentially over time. This will provide a good ROI for our investors over time and lower volatility.

In addition, by stimulating a constant increase in the value of Ubuntu token, the initial \$2000 invested will also increase. The additional gains will be held and shared through airdrops between several random holders and for marketing purposes.

UBUNTU TOKEN

DISTRIBUTION INFORMATION

TOKEN NAME:	UBUNTU TOKEN (UBUT)
SYMBOL:	UBUT
TOKEN TYPE :	BEP20 (BINANCE SMART CHAIN)
TOTAL SUPPLY:	100,000,000,000

100%

Total supply of 100 billion Ubuntu tokens. Every transaction has a 6% fee distributed in such a way to encourage holding and prevent dumps, which are distributed as follows:

2%

2% of every transaction goes to a charity pool that will be distributed to partner charity organisations chosen by our holders.

2%

2% will be allocated for buy-back, liquidity pools, and rewards pools such as community giveaways and airdrops.

1%

1% of every transaction is distributed back to the Ubuntu Token holders.

1%

1%: DAO for Token Development, Operations and Marketing.

— ROADMAP —

Ubuntu Token (UBUT) Roadmap will continue to evolve as we continuously explore ways to provide best return on investment (ROI) for our token holder.

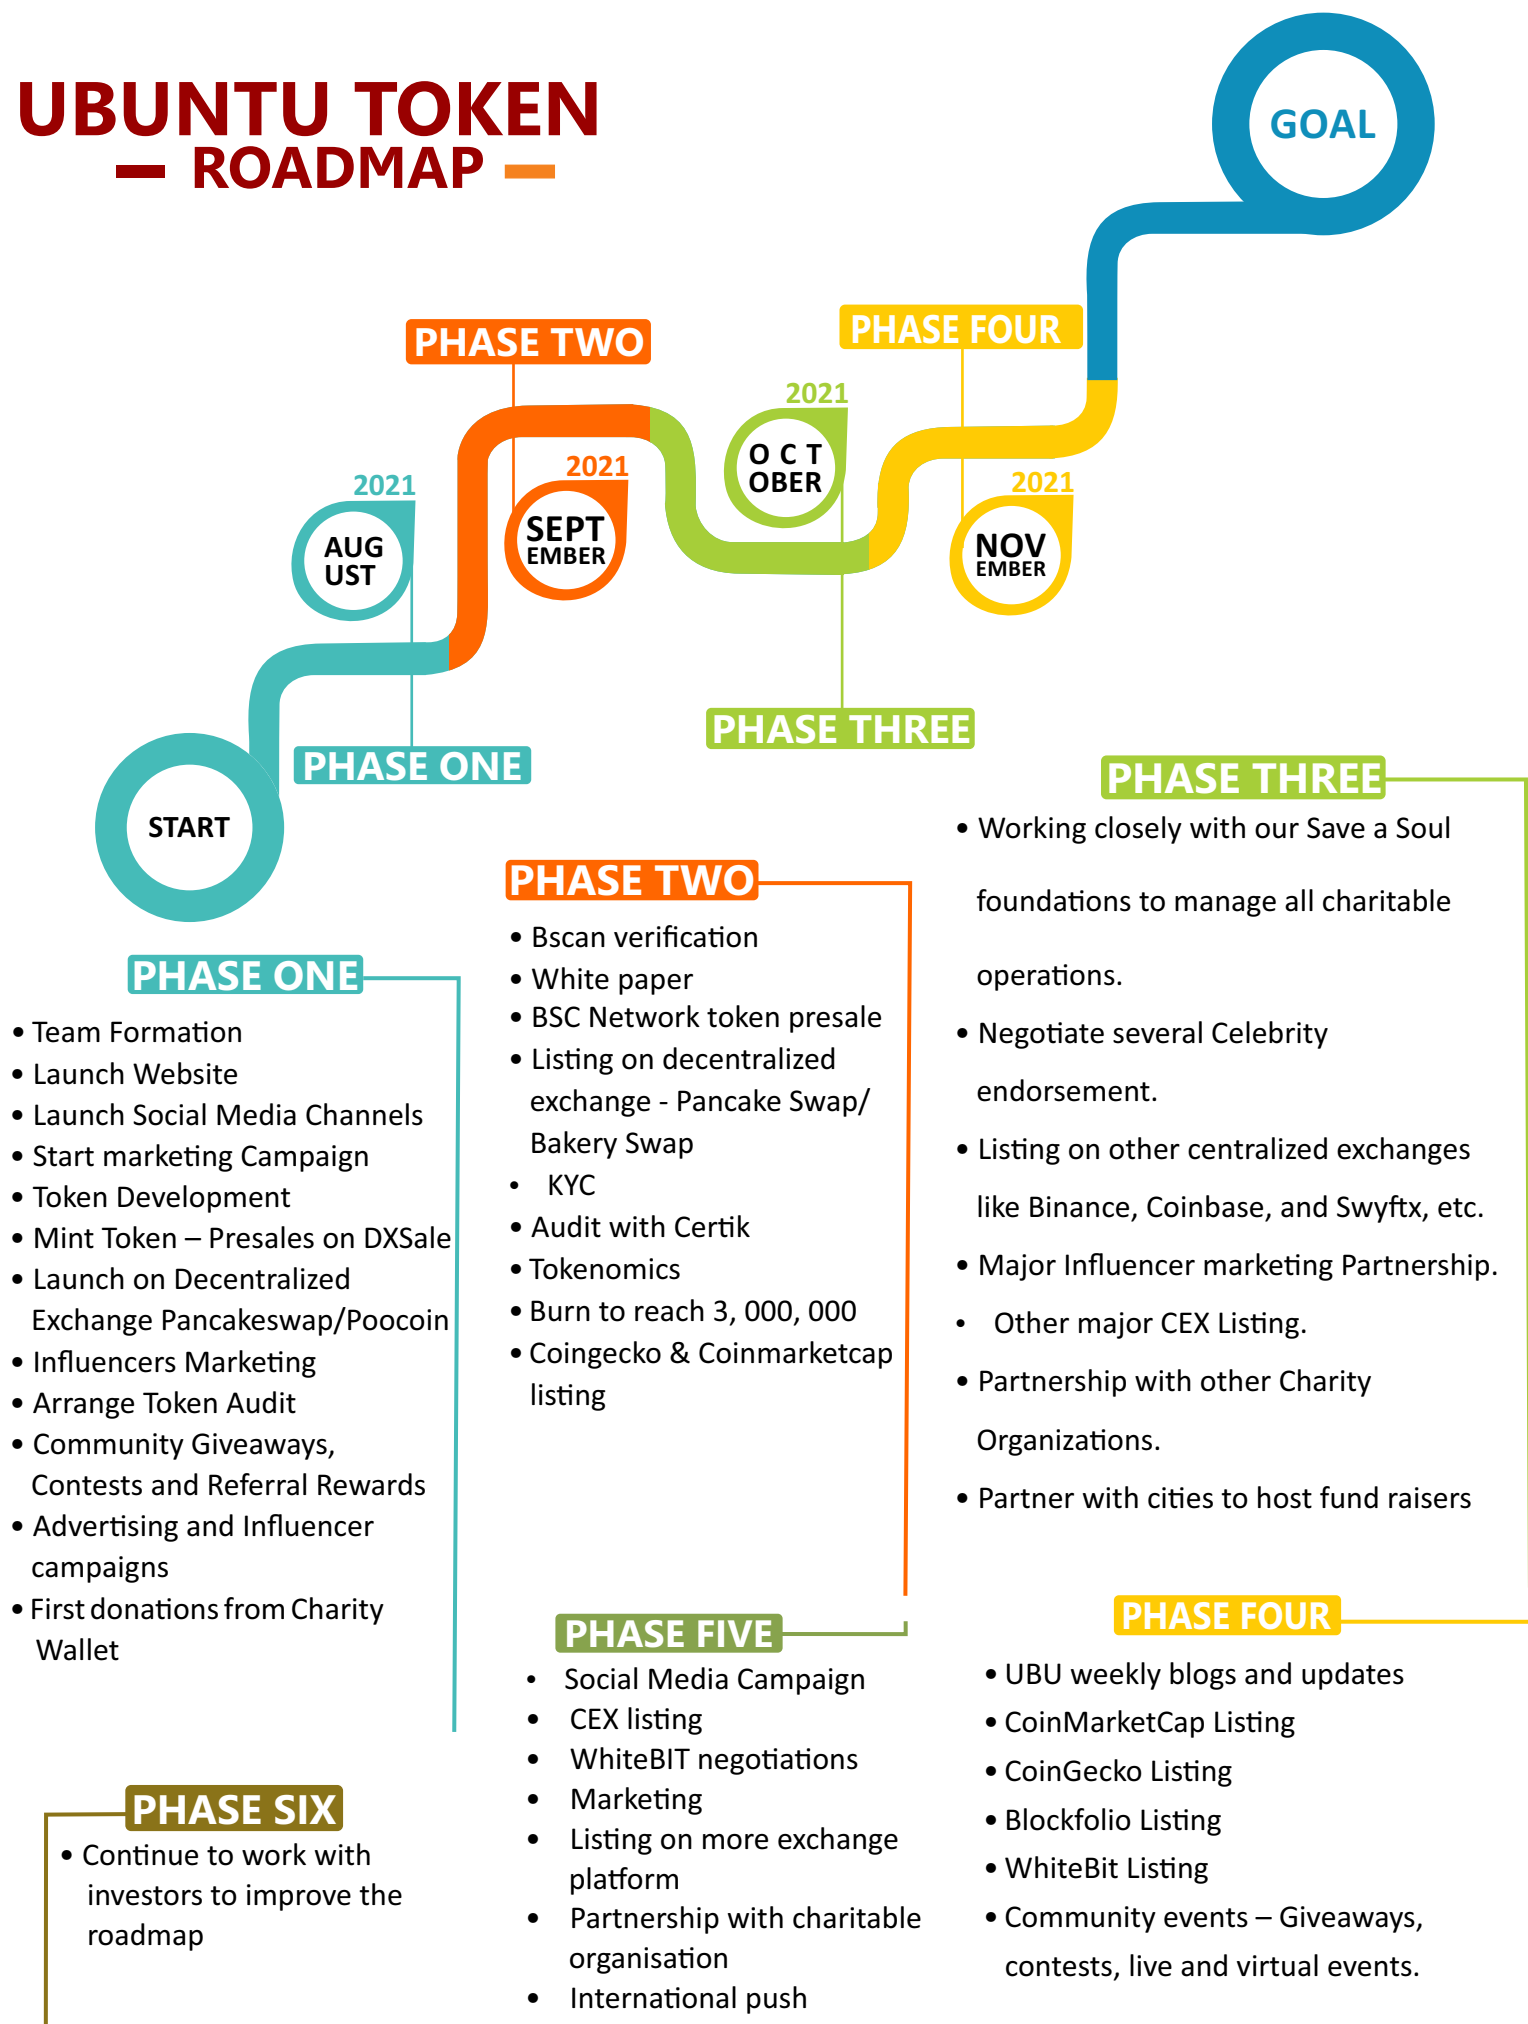

Both our leadership team and the UBUNTU community will decide the charities to which we will donate.

We will endeavor to keep our investors and community informed via our website and other social media channels and groups.

GLOSSARY

- **BNB** – Binance Coin
- **BTC** – Bitcoin
- **DApp** – Decentralized app that is deployed on a smart contract
- **Liquidity Pool** – Tokens which are designated to and locked on a cryptocurrency exchange in order to facilitate liquidity of trading
- **UBUT** – The crypto – asset and currency exchange that is being developed by UBUNTU token
- **NFT** – Non-Fungible token. A unique digital asset.
- **Pump and dump** – When a security with no intrinsic value is inflated to a high price and then sold off by its largest and earliest holders.
- **Rug pull** – When a cryptocurrency is released and the founder withdraws all funds leaving the buyers holding the bag
- **Burning Token** – Taken out of circulation and sent to a wallet to which no-one else has access, increasing the scarcity of the Ubuntu Token
- **Smart contract** – A protocol related to a cryptocurrency that automatically executes functions defined by its creator
- **Tokenomics** – The unique characteristics and functionalities of a token that is deployed on a smart contract.
